MECHANICAL ENGINEERING DEPARTMENT M. M. M. UNIVERSITY OF TECHNOLOGY, GORAKHPUR-273010, UP August 2021

Department of Mechanical Engineering Madan Mohan Malaviya University of Technology Gorakhpur

M.Tech: Energy and Technology Management

VISION:

To become an Internationally Acclaimed Department of Higher Learning, Research, Innovation, and Incubation in Mechanical Engineering by 2035.

MISSION:

- 1. To provide quality education to the students in order to make them globally competitive Mechanical Engineers.
- 2. To enhance the skills of students using modern engineering tools and experimental techniques to solve real life mechanical engineering problems.
- 3. To make them work in groups with high level of societal, environmental, and professional ethics with the self-learning attitude.
- 4. To establish linkages with the Industries, R&D organizations, and educational institutions in India and abroad for excellence in teaching, research, and innovation.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO)

- PEO-1: To prepare students in the area of mechanical engineering for successful careers in industries, academia, and research organizations through state-of-the-art education
- PEO-2: To provide students with a sound foundation in science and engineering fundamentals necessary to formulate, analyze and solve mechanical engineering problems and to prepare them for research activities.
- PEO-3: To develop ability in the field of machine design, thermal engineering, manufacturing, and industrial engineering so as to design and create novel products, processes and solutions for the real-life problems
- PEO-4: To inculcate in students professional and ethical attitude, effective communication & teamwork skills, and ability to apply multidisciplinary knowledge to relate mechanical engineering problems to broader environmental and social context.
- PEO-5: To engage students in professional development through the self-learning and keep abreast with the state-of-the-art technology needed for a successful professional career.

PROGRAMME OUTCOME (POS)

- PO-1 Apply knowledge of mathematics, science, and mechanical engineering fundamentals to solve real life problems.
- PO-2 Identify, formulate, apply engineering knowledge, and conduct research to solve real life mechanical engineering problems.
- PO-3 Ability to design a system, component, or process by applying the knowledge of Machine Design, Thermal Engineering, Manufacturing to meet desired needs within realistic constraints such as economic, environment, cultural, societal, health and safety and sustainability.
- PO-4 Ability to design and conduct experiments, as well as to analyze and interpret data and synthesis of information to reach out to solutions.
- PO-5 Select, create, and apply modern engineering and IT tools, including CAD, CAM to solve complex engineering problems.
- PO-6 Apply reasoning to assess the impact of engineering solutions and practices in a global, societal, health, safety, legal and cultural context.
- PO-7 Understand the impact of engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.
- PO-8 Apply ethical principle, inculcate moral values and commit to professional ethics, responsibility and norms of engineering practice.
- PO-9 Function effectively as member or leader in diverse teams and in multi-disciplinary settings.
- PO-10 Communicate effectively on complex engineering activities with engineering fraternity and society at large such as being able to understand and write effective reports, documents, presentations and give and take instructions clearly.
- PO-11 Apply knowledge and understanding of industrial engineering and management principles and function in multidisciplinary teams as a member or leader to manage projects.
- PO-12 Recognition of the need for and an ability to engage in life-long self-learning in state-of-the-art technology.

PROGRAMME SPECIFIC OUTCOME (PSOS)

- PSO-1. Graduate will be able to identify, analyze and solve engineering problems relating to mechanical systems together with allied engineering streams.
- PSO-2. Graduates will learn managerial skills and interdisciplinary technologies to work effectively in a team and in a society by following ethical and environmental practices.

MECHANICAL ENGINEERING DEPARTMENT M. M. M. UNIVERSITY OF TECHNOLOGY GORAKHPUR

Department of Mechanical Engineering Madan Mohan Malaviya University of Technology, Gorakhpur-273 010, India

M. Tech. (Energy Technology & Management) Syllabus

MMS 601/MAS 101 NUMERICAL METHODS AND ENGINEERING OPTIMIZATION

: Basic Sciences & Maths (BSM) Course category

Pre-requisites : NIL

Contact hours/week : Lecture: 3, Tutorial: 1, Practical: 2

Number of Credits

Course Assessment : Continuous assessment through tutorials, assignments, quizzes, One Minor and one Major Theory & Practical Examination methods The students are expected to be able to demonstrate the

following knowledge, skills and attitudes after completing this

1. To find the root of a curve using iterative methods

- 2. To interpolate a curve using Gauss, Newton's interpolation formula.
- 3. Use the theory of optimization methods and algorithms developed for various types of optimization problems.
- 4. To apply the mathematical results and numerical techniques of optimization theory to Engineering problems.

Topics Covered

Course Outcomes

UNIT-I

Numerical Methods I: Solution of algebraic and transcendental equations by Bisection, Regula- Falsi and Newton-Raphson methods. Interpolation: Newton's forward and backward interpolation formulae, Lagrange's formula and Newton's divided difference formula.

9 UNIT-II

Numerical Methods II: Solution of system of linear equations by Gauss Jacobi method, Guass-Siedel method, Relaxation method and LU decomposition method, Cholesky method. Numerical differentiation, Numerical Integration: Trapezoidal Rule, Simpson's one-third and three-eight rules.

UNIT-III

Classical Optimization Techniques: Introduction, Review of single and multi-variable optimization methods with and without constraints, Non-linear one-dimensional minimization problems, Examples.

UNIT-IV 9

Constrained Optimization Techniques: Introduction, Direct Methods, Cutting plane method, Indirect methods, Convex programming problems, Exterior penalty function method, Examples and problems. Unconstrained optimization techniques: Introduction, Descent methods, Steepest Descentmethods Newton's method, Quasi-Newton's method.

Experiments:

- 1. To implement Regula Falsi method to solve algebraic equations.
- 2. To implement numerical integration to solve algebraic equations.
- 3. To implement Gauss-Siedel method for solution of simultaneous equations.
- 4. To implement Runge-Kutta method of order four to solve differential equations.
- 5. To implement Euler's method to find solution of differential equations.
- 6. To find optimum solution to problem parameters.
- 7. To find derivatives of static displacements and stresses.
- 8. To write Computer based algorithm and program for solution of Eigen-value problems.
- 9. Reduction of size of an optimization problem using Reduced basis technique.
- 10. To find Derivatives of Eigenvalues and Eigen vectors.

Books & References

- 1. S.S.Rao; Engineering Optimization, New Age International.
- 2. E.J. Haug and J.S. Arora, Applied Optimal Design, Wiley New York.
- 3. P. Kandasamy, K.Thilagavathy & K.Gunavathy, Numerical Methods, S. chand Publ.

MME-102A	Computati	ion	al Methods in Engineering
Course Category		:	Program Core (PC)
Pre-requisites		:	NIL
Contact Hours/Week		:	Lecture: 3, Tutorial: 1, Practical: 0
Number of Credit	ts .	:	4
Course Assessment Methods		:	Continuous assessment through tutorials, attendance, home assignments, quizzes, one minor test and one major examination
Course Outcomes	3	:	The students are expected to be able to demonstrate the following knowledge and skills after completing this course

- 1. Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions
- 2. Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, andthe solution of differential equations.
- 3. Ability to select appropriate numerical methods for various types of problems in engineering.
- 4. Analyse and evaluate the accuracy of common numerical methods.

UNIT-I

Introduction to Linear Algebraic Equation, Roots of Equation, Numerical differentiation and Integration, Initial and boundary value problems.

Systems of Linear Algebraic Equations: Gauss Elimination Method, LU DecompositionMethods, Interpolation and Curve Fitting: Polynomial Interpolation, Interpolation with Cubic Spline. (9)

UNIT-II

Roots of Equations: Incremental Search Method, Method of Bisection, Methods Based onLinear Interpolation, Newton–Raphson Method, Systems of Equations. (9)

UNIT-III

Numerical Differentiation and Integration: Finite Difference Approximations, Richardson Extrapolation, Derivatives by Interpolation, Implicit and explicit integration schemes. (9)

UNIT-IV

Initial and Boundary Value Problems: Taylor Series Method, Runge–Kutta Methods, Shooting Method.

Symmetric Matrix Eigenvalue Problems. (9)

Textbooks

- JaanKiusalaas, Numerical Methods in Engineering with Matlab, Second Edition, Cambridge University Press.
- 2. Arnold Neumaier, Introduction to Numerical Analysis, , Cambridge University Press.

MME-201A ADV	ANO	CED ENERGY CONVERSION SYSTEM	
CourseCategory	:	Program Core (PC)	
Pre-requisites	:	NIL	
Contact Hours/Week	:	Lecture: 3, Tutorial: 1, Practical: 2	
Number of Credits	:	5	
Course Assessmer	t :	Continuous assessment through tutorials, attendance, home assignments, qui	izzes,
Methods		practical work, record, viva voce and One Minor test and One Major Theo	ory &
		Practical Examination.	
Course Outcomes	Course Outcomes : The students are expected to be able to demonstrate the following know		edge,
		skills and attitudes after completing this course.	
Ability to apply th	e cor	cept of Exergy in energy conversion systems.	
		different parameters of combined vapour power cycles which affects the ov	erall
efficiency of the the		• •	
		lifferent operating and design parameters of the air propulsion system.	
4. Ability to analyze	the p	performance of energy conversion utility system.	
Topics Covered			
UNIT-I			
		ersion systems: Energy sources and demand, CO ₂ emissions and global temperature,	9
		nversion, Energy efficiencies.	
	-	s: Reversible work and irreversibility, Exergy change of a closed and open system,	
		and mass, Decrease of exergy principle and exergy destruction, Exergy balance in	
closed and open system,	Ener	gy efficiency based on the second law of thermodynamics.	
UNIT-II			
Combined Gas and	Vapo	our Power Cycles: Parameter affecting the performance of Rankine cycle,	9
		reheat-regenerative Rankine cycle, Supercritical Rankine cycle, Binary vapour power	
		Parameter affecting the performance of Brayton cycle, Recapitulation of simple and	
_		ed Brayton cycle, Co-generation and Tri-generation, Combined gas and vapour power	
cycle, Second law analy	sis of	combined cycles.	
UNIT-III			
Coa Tumbing and Aim I	ropu	Ilsion: Introduction of gas turbine engines, Thrust equations, propulsive efficiency,	9
	_		1
	ine e	engines, Parametric cycle analysis of ideal engine. Turbojet, Turboprop, Turbofan, e.	
Components of gas turb	ine e		
Components of gas turb Ram jet and Scram jets o	ine e		9
Components of gas turb Ram jet and Scram jets of UNIT-IV Energy Conversion Uti Boiler, performance eva	ine engin	e.	9

losses in steam turbine, condensers and its thermodynamic analysis.

EXPERIMENTS

Minimum Eight experiments are to be performed

- 1. Study and analysis of modern high pressure Boilers.
- 2. Experiment on condenser.
- 3. Experiment on MPFI four stroke multi cylinder petrol engine.
- 4. Experiment on CRDI four stroke multi cylinder diesel engine.
- 5. Experiment on axial flow compressor.
- 6. Experiment on Hydraulic Turbines.
- 7. Experiment on Sterling Engine.
- 8. Experiment on cooling tower and their performance characteristics.

9. Experiment on exhaust gas analyser.
Textbooks
APPLIED Thermodynamics by P. K. Nag, TMH Edition.
Thermodynamics and Heat power (8th Edition): Irving Granet, Maurice Bluestein, CRC Press Taylor & Francis
Group.
Principles of Energy Conversion: A.W.Culp(McGrawHill International)
Thermodynamics: An engineering approach (8th Edition), Tata McGraw Hill.
Advanced Engineering Thermodynamics (2 nd Edition), John Wileys& Sons, Inc.
Reference books
Aircraft Propulsion and Gas Turbine Engines, Second Edition: Ahmed F. El-Sayed, CRC Press Taylor & Francis
Group.
Energy Conversion Principles:Begamudre,Rakoshdas
Applied Thermodynamics: Availability and Energy Conversion Method: Kam W. Li, CRC Press Taylor & Francis
Group.
Combined Cycles and Steam Turbine Power Plant: Rolf Keh and FrenkHennemann, PennWell Books; 3rd Edition.
Boilers for Power and Process: Kumar Rayaprolu, CRC Press Taylor & Francis Group.
Thermal power Plant Design & operation: Dipak Sarkar, Elsevier; 1 edition

MME-206	R	REFRIGERATION & AIR CONDITIONING SYSTEM DESIGN	
Course Category	:	Program Core (PC)	
Pre-requisites	:	NIL	
Contact Hours/Week	:	Lecture: 3, Tutorial: 1, Practical: 2	
Number of Credits	:	5	
Course Assessment Methods	:	Continuous assessment through tutorials, attendance, home assignments, quizzes, class tests and One Minor test and One Major Theory Examination.	
Course Outcomes	:	The students are expected to be able to demonstrate the following knowledge, skills and attitudes after completing this course.	

- 1. Understand the basics of refrigeration, different refrigeration cycles and different types of refrigeration systems.
- 2. Understand the properties of refrigerants, its impact on environment and designing of different components of refrigeration and air conditioning system.

3.	Basics and design calculations of air conditioning systems.	
4.	Knowledge of different types of non-conventional refrigeration systems.	
	pics Covered	
	IT-I	
	capitulation of basic refrigeration:	9
	versed Carnot cycle, Joule cycle, Simple vapour compression systems, Multistage vapour compression system,	
	lti evaporator refrigeration systems, Cascade systems, Vapourabsorbtion refrigeration systems, Ejector	
	npression system	
	IT-II	
	frigerants:	9
	ssification of Refrigerants, Refrigerant properties, ODP and GWP, Environmental Impact-Montreal/ Kyoto	
	tocols-Eco Friendly Refrigerants	
	sign of components of refrigeration and air conditioning system:	
Des	sign of compressors, Design of expansion devices, Duct design	
UN	IT-III	
Air	Conditioning:	9
	perties of moist air, Psychrometry of Air Conditioning processes, Design conditions of air conditioning, Heat	
	asfer through building structure, Heating and cooling load calculations	
UN	IT-IV	
No	n-Conventional Refrigeration Systems:	9
Th	ermoelectric Refrigeration, Vortex tube refrigeration, Pulse tube refrigeration, Cooling by adiabatic	
den	nagnetization, Solar refrigeration and air conditioning systems	
EX	PERIMENTS	
Mir	nimum Eight experiments are to be performed	
	1. Experiment on refrigeration test rig and calculation of various performance parameters.	
	2. Experiment on vapour absorption refrigeration test rig.	
	3. To study different types of expansion devices used in refrigeration system.	
	4. To Study window air conditioner.	
	5. Experiment on Ice-plant.	
	6. Experiment on air-conditioning test rig & calculation of various performance parameters.	
	7. Experiment on Vortex tube test rig.	
	8. To study air washers and determine efficiency of air washer.	
	9. Visit of a central air conditioning plant and its detailed study.	
	10. Visit of cold-storage and its detailed study.	
(F)		
lex	atbooks	
	1. Refrigeration and Air Conditioning: Manohar Prasad, New Age publication	
	2. Refrigeration and Air Conditioning: C.P. Arora, Mc-Graw hill publication	
	3. Principles of Refrigeration: Roy. J Dossat, Pearson publication	
Ref	ference books	
	Refrigeration and Air Conditioning: W.F. Stocker and J. W. Jones, Mc-Graw hill Inc. publication	
	2. Refrigeration and Air Conditioning: G.F. Hundy, A.R. Trott and T.C. Welch (Auth.) -Elsevier, Butterwor	th-
	Heinemann (2008)	
	Handbook of Air Conditioning and Refrigeration: Shan K. Wang-, Mc-Graw hill Inc. publication	
	Solar Air Conditioning and Refrigeration: A.A.M. SAYIGH and J.C. MCVEIGH, PERGAMON Press	
	T. John Am Conditioning and Refrigeration. A.A.M. SATIOH and J.C. MC VETOH, LEROAMON FIESS	

MME-204	ADVANCED HEAT TRANSFER		
Course Category	: Program Core (PC)		
Pre-requisites	: NIL		
Contact Hours/Week	: Lecture: 3, Tutorial: 1, Practical: 2		
Number of Credits	: 5		
Course Assessment Methods	: Continuous assessment through tutorials, attendance, home assignments, quizzes, practical work, record, viva voce and Three Minor tests and One Major Theory and Practical Examination.		
Course Outcomes	: The students are expected to be able to demonstrate the following knowledge, skills and attitudes after completing this course		

- 1. Student will be able to calculate the temperature profile and rate of heat transfer in 1D system with variable thermal conductivity and heat generation and also the study of various fin profiles.
- 2. Student will be able to make calculations for temperature and rate of heat transfer in steady state and unsteady state 2D systems using Groeber's and Heisler charts.
- 3. Ability to understand the basics of radiation and its various models of successive reflection and also radiation through absorbing media.
- 4. Ability to understand and calculate velocity and temperature profile and rate of heat transfer by convection over a flat plate and tubes.

	•		
10	nics	Cove	rea
	7200	~	

UNIT-I

Review: Reviews of basic laws of Conduction, Convection and Radiation

Conduction: One-dimensional steady state conduction with variable thermal conductivity and with internal distributed heat source and moving heat source problem, Local heat source in non-adiabatic plate, Thermocouple conduction error, Extended Surfaces-Review, Optimum fin of rectangular profile, straight fins of triangular and parabolic profiles, Optimum profile, Circumferential fin of rectangular profile, spines, design considerations.

UNIT-II

2D steady state heat conduction, semi -infinite and finite flat plates, Temperature fields in finite cylinders and in infinite semi-cylinders, spherical shells, Graphical method, relaxation technique, Unsteady state conduction, Sudden changes in the surface temperatures of infinite plates, cylinders and spheres using Groeber's and Heislercharts for plates, cylinders and spheres suddenly immersed in fluids.

IINIT-III

Radiation: Review of radiation principles, Diffuse surfaces and the Lambert's cosine law. Radiation through non absorbing media, Hottel's method of successive reflections, Gebhart's unified method, Poljak's method. Radiation through absorbing media, Logarithmic decrement of radiation, Apparent absorptive of simple shaped gas bodies, Net heat exchange between surfaces separated by absorbing medium, Radiation of luminous gas flames.

UNIT-IV

Convection: Heat transfer in laminar flow, free convection between parallel plates, forced internal flow through circular tubes, fully developed flow, Velocity and thermal entry length, solutions with constant wall temperature and with constant heat flux, Forced external flow over a flat plate, two-dimensional velocity and temperature boundary layer equations, Karman Pohlhousen approximate integral method. Heat transfer in turbulent

flow, Eddy heat diffusivity, Reynold's analogy between skin friction and heat transfer, Prandtl-Taylor, Von Karman and Martineli's analogies, Turbulent flow through circular tubes.

EXPERIMENTS

Minimum Eight experiments are to be performed

- 1. Experiment on Conduction Composite wall experiment
- 2. Experiment on Conduction Composite cylinder experiment
- 3. Experiment on Convection Pool Boiling experiment
- 4. Experiment on Convection Experiment on heat transfer from tube-natural convection.
- 5. Experiment on Convection Heat Pipe experiment.
- 6. Experiment on Convection Heat transfer through fin-natural convection.
- 7. Experiment on Convection Heat transfer through tube/fin-forced convection.
- 8. Experiment on Any experiment on Stefan's Law, on radiation determination of emissivity, etc.
- 9. Experiment on Any experiment on solar collector, etc.
- 10.Experiment on Heat exchanger Parallel flow experiment
- 11. Experiment on Heat exchanger Counter flow experiment
- 12. Experiment on Any other suitable experiment on critical insulation thickness.
- 13. Experiment on Conduction Determination of thermal conductivity of fluids.
- 14. Experiment on Conduction Thermal Contact Resistance Effect.

Textboo	ks			
1.	Advances in Heat Transfer- James P Hartnett (Academic Press)			
2.	Principles of Heat Transfer- Kaviany M (Wiley-International)			
3.	Heat Transfer: Principles and Applications-B.K. Datta (Prentice Hall of India)			
Referen	ce books			
1.	Heat Transfer Calculations- Myer Kutz (McGraw-Hill)			
2.	Convective Heat Transfer-Burmeister Louis (Wiley-International)			

MME-204A		CLEAN ENERGY SYSTEMS
Course Category	:	Program Core (PC)
Pre-requisites	:	NIL
Contact Hours/Week	:	Lecture: 3, Tutorial: 1, Practical: 0
Number of Credits	:	4
Course AssessmentMethods	:	Continuous assessment through tutorials, attendance, home assignments, quizzes, and One Minor test and One Major Theory Examination.
Course Outcomes	:	The students are expected to be able to demonstrate the following knowledge, skills and attitudes after completing this course.

- 1. Ability to understand basics of solar energy, solar time calculations and production and utilization of biomass in different areas.
- 2. Student will be able to understand basics of wind energy, power calculations, site selection and wind power production plants.
- 3. Ability to understand the principle, construction and application of fuel cell and also about power production and distribution by hydel energy.
- 4. Ability to apply the concept of material and energy balance by various methods and flow charts.
- 5. Ability to understand the methods and tools of energy audit along with maximizing the energy efficiency.

Topics Covered UNIT-I Solar Energy: Sun as Source of Energy, Availability of Solar Energy, Nature of Solar Energy, Solar Energy & Environment. Various Methods of using solar energy -Photothermal, Photovoltaic, Photosynthesis, Present & Future Scope of Solar energy Bio-mass energy: Biomass: Generation and utilization, Properties of biomass, Agriculture Crop & Forestry residues used as fuels. Biochemical and Thermo-Chemical Conversion, Combustion, Gasification, Biomass gasifiers and types etc., Applications of Gasifiers to thermal power and Engines, Biomass as a decentralized power generation source for villages. UNIT-II Wind Energy: Wind Energy: Basics & Power Analysis, Wind resource assessment, Power Conversion Technologies and applications, Wind Power estimation techniques, Principles of Aerodynamics of wind turbine blade, Various aspects of wind turbine design, Wind Turbine Generators: Induction, Synchronous machine, constant V & F and variable V & F generations, Reactive power compensation. Site Selection, Concept of wind form & project cycle, Cost economics UNIT-III Fuel Cell: Fuel cell – Principle of working, construction and applications Material and Energy Balance: Basic Principles; The Sankey Diagram and its Use; Material Balances; Energy Balances; Method for Preparing Process Flow Chart; Facility as an Energy System; How to Carryout Material and Energy (M & E) Balance. UNIT-IV Energy Audit: Energy Audit: Types and Methodology; Energy Audit Reporting Format; Understanding Energy Costs; Benchmarking and Energy Performance; Matching Energy Usage to Requirement; Maximizing System Efficiency; Fuel and Energy Substitution; Energy Audit Instruments; Duties and responsibilities of energy auditors. **Textbooks** Principles of Thermal Process: Duffie -Beckman. 2. Solar Energy Handbook: Kreith and Kreider (McGraw Hill) 3. Biomass Renegerable Energy - D.O.hall and R.P. Overeed 4. Energy Management: W.R.Murphy, G.Mckay (Butterworths) Reference books Renewable Sources of Energy and Conversion Systems: N.K. Bansal and M.K. Kleeman 2. Wind energy Conversion Systems – Freris L.L. (Prentice Hall1990) 3. Efficient Use of Energy: I.G.C.Dryden (Butterworth Scientific)

MME-220 MINOR PR	MINOR PROJECT	
Course Category	:	Program Core (PC)
Pre-requisites	:	NIL
Contact Hours/Week	:	Lecture: 0, Tutorial: 0, Practical: 8
Number of Credits	:	4
Course Assessment	:	Continuous assessment through attendance, project reports, mid semester
Methods		presentation and end semester presentation.
Course Outcomes	:	The students are expected to be able to demonstrate the following
		knowledge, skills and attitudes after completing this course

- 1. Understanding of importance of literature survey.
- 2. Develop ability to comprehend the research paper.
- 3. Understanding of steps involved in writing the research paper.
- 4. Develop the ability to write a research paper.

MME-230	DISSERTATION PART-I	
Course Category	:	Program Core (PC)
Pre-requisite Subject	:	NIL
Contact Hours/Week	:	Lecture: 0, Tutorial: 0, Practical: 8
Number of Credits	:	4
Course Assessmen	it :	Continuous assessment through attendance, project reports, mid semester
Methods		presentation and end semester presentation.
Course Outcomes	:	The students are expected to be able to demonstrate the following
		knowledge, skills and attitudes after completing this course

- 1. Analyze and apply prior knowledge to designing and implementing solutions to open-ended computational problems while considering multiple realistic constraints.
- 2. Analyze the selected topic, organize the content and communicate to audience in an effective manner
- 3. Application of various thermal engineering concepts and analyze Database.
- 4. Evaluate the various validation and verification methods

MME-240	SEMINAR		
CourseCategory	:	Program Core (PC)	
Pre-requisites	:	NIL	
Contact Hours/Week	:	Lecture: 0, Tutorial: 0, Practical: 4	
Number of Credits	:	2	
Course Assessment	:	Continuous assessment through presentations and viva voce	
Methods			
Course Outcomes	:	The students are expected to be able to demonstrate the following	
		knowledge, skills and attitudes after completing this course	

- 1. Ability to understand the working in real environment and get acquainted with the organization structure, business operations and administrative functions.
- 2. They able to enhance the communications and presentation skills.
- 3. Ability to evaluate, credit, and synthesize sources.
- 5. Understanding to write technical documents and give oral presentations related to the work completed.

MME-250	DISSEI	DISSERTATION PART-II	
Course category	:	Program Core (PC)	
Pre-requisite Subject	:	Dissertation Part-I	
Contact hours/week	:	Lecture: 0, Tutorial: 0, Practical: 28	
Number of Credits	:	14	
Course Assessment	:	Continuous assessment through attendance, project reports, mid	
methods		semester presentation and end semester presentation.	
Course Outcomes	:	The students are expected to be able to demonstrate the following	
		knowledge, skills and attitudes after completing this course	

- 1. Synthesizing and applying prior knowledge to designing and implementing solutions to open-ended computational problems while considering multiple realistic constraints.
- 2. Analyze the selected topic, organize the content and communicate to audience in an effective manner
- 5. Application of various thermal engineering concepts and analyze Database.
- 3. Evaluate the various validation and verification methods
- 4. Analyzing professional issues, including ethical, legal and security issues, related to computing projects

MME-251	ECONOMICS AND PLANNING OF ENERGY SYSTEMS		
Course Category	Program Elective (PE)		
Pre-requisites	NIL		
Contact Hours/Week	Lecture: 3, Tutorial: 1, Practical: 0		
Number of Credits	4		
Course Assessment	Continuous assessment through tutorials, attendance, home assignments	s,	
Methods	quizzes,		
	and Three Minor tests and One Major Theory Examination.		
Course Outcomes	The students are expected to be able to demonstrate the following knowled	edge,	
	skills and attitudes after completing this course.		

- 1. Ability to understand the evaluation of energy technology and economics of energy conservation.
- 2. Ability to understand Energy demand, Energy models and energy planning.
- 3. Ability to understand implications of energy, clean development mechanism, energy transfer with financing.
- 4. Ability to understand the carbon credits, trading opportunities and energy policy acts with regulations.

UNIT-I

Relevance of financial and economic feasibility, Evaluation of energy technologies and systems, Basics 9 of engineering economics, financial evaluation of energy technologies, Social cost benefit analysis, Case studies ontechno-economics of energy conservation and renewable energy technologies.

UNIT-II						
Energy demandanalysis and forecasting, assessment and evaluation, Energy demand –						
Energy supply						
supply balancing, Energy models, Software for energy planning,						
UNIT-III						
Energy – economy interaction, Energy investment planning and project formulation. Energy pricing, Policy	9					
and planning implications of energy - environment interaction, clean development mechanism, technologytransfer						
and its financing						
UNIT-IV						
Carbon credits and trading opportunities, Financing of energy systems, Energy policy related acts and regulations						
Textbooks						
Economic Issues of Renewable Energy Systems Gerhard Oelert, Falk Aner& Klaus Pertz						
Reference books						
1. Energy Policy: B. G. Desai						

MME-254	C	OMBUSTION ENGINEERING
CourseCategory	:	Program Elective (PE)
Pre-requisites	:	NIL
Contact Hours/Week	:	Lecture: 3, Tutorial: 1
Number of Credits	:	4
Course Assessment Methods	:	Continuous assessment through tutorials, attendance, home assignments, quizzes, and Three Minor tests and One Major Theory Examination.
Course Outcomes	:	The students are expected to be able to demonstrate the following knowledge, skills and attitudes after completing this course.

- 1. Ability to understand the basics, importance and thermodynamics behind combustion.
- 2. Ability to understand kinetics of combustion and various aspects pertaining to propagation of flame.
- 3. Ability to understand advances of burning of fuel in spray form and also about the ignition.
- 4. Student will be able to tell combustion generated pollution and their controls.

UNIT-I

Introduction: Importance of combustion; Combustion equipment's, Hostile fire problems, pollution problems arising from combustion.

Thermodynamics of Combustion: Enthalpy of formation; Enthalpy of reaction; Heating values; First & second laws; Analysis of reaction system, Chemical equilibrium, Equilibrium composition; Adiabatic & equilibrium, Flame temperature.

UNIT-II

Kinetics of Combustion: Law of mass action; Reacting rate; Simple and complex reaction; Reaction order &molecularity, Arhenius laws; Activation Energy; Chain reaction; Steady rate & Partial equilibrium approximation; chain explosion; Explosion limit and oxidation characteristics of hydrogen, Carbon monoxide, Hydrocarbons.

Flames: Remixed flame structure & propagation of flames in homogeneous mixtures; Simplified RankineHugoniot relation, Properties of Hugoniot curve, analysis of Deflagration & detonation branches, Properties of Chapmen Jouguet wave, Laminar flame structure; Theories of flame propagation & calculation of flame speedmeasurements. Stability limits of laminar flames; Flammability limits & quenching distant, Burner design, Mechanism of flame stabilization in laminar &turbulent flows, Flame quenching, Diffusion flames; Comparison of diffusion with premixed flame, combustion of gaseous fuel, jets burke & Schumann development.

UNIT-III

Burning of Condensed Phase: General mass burning considerations, Combustion of fuels droplet in a quiescent and convective environment, Introduction to combustion of fuel sprays

Ignition: Concept of ignition, Chain ignition, Thermal spontaneous ignition, Forced ignition.

UNIT-IV

Combustion Generated Pollution & its Control: Introduction, Nitrogen oxide, Thermal fixation of atmospheric nitrogen prompts, NO, Thermal NOx & control in combustors. Fuel NOx & control, post combustion destruction of NOx, Nitrogen dioxide, carbon monoxide Oxidation-Quenching, Hydrocarbons, Sulphur oxide.

Textbooks

- 1. Internal Combustion Engines: Applied Thermo sciences- Ferguson Colin R (John Wiley)
- 2. Engineering Fundamentals of the Internal Combustion Engine- Pulkrabek (Pearson Education)

Reference books

- 1. Instrumentation for Combustion and Flow in Engines- Durao D F G (Kluwer Aca)
- 2. Energy from Biomass: A Review of Combustion and Gasification Technologies Quaak Peter

MME-253	D	DESIGN OF HEAT TRANSFER EQUIPMENTS	
CourseCategory	:	Program Elective (PE)	
Pre-requisites	:	NIL	
Contact Hours/Week	:	Lecture: 3, Tutorial: 1, Practical: 0	
Number of Credits	:	4	
Course Assessment	:	Continuous assessment through tutorials, attendance, home assignments,	
Methods		quizzes, and One Minor tests and One Major Theory Examination.	
Course Outcomes	:	The students are expected to be able to demonstrate the following knowledge,	
		skills and attitudes after completing this course.	

- 1. Student will be able to design co-current, counter current and cross flow heat exchangers.
- 2. Student will be able to design hair-pin heat exchangers and their calculations.
- 3. Student will be able to design shell and tube heat exchangers and boiling curve & condensation mechanisms.
- 4. Student will be able to design the cooling tower and evaporators in various applications.

Topics Covered

UNIT-I

Introduction to Heat exchangers: Definition, TEMA classification of heat exchangers and their applications, concept of varying overall heat transfer coefficient.

Analysis of heat exchangers: LMTD analysis of single pass co-current, counter-current and cross flow heat

exchangers, special operating conditions, influence of fouling factor, contrast between LMTD and AMTD, effectiveness-NTU method, charts solutions for heat exchangers, pressure drop calculation in heat exchanger. UNIT-II Compact and plate heat exchangers: Types, merits and demerits, design of compact heat exchangers, performance influencing parameters, limitations. Hair-pin Heat Exchangers- Introduction to counter flow double pipe or hair-pin heat exchangers, Augmentation of hair-pin heat exchangers, film coefficient in tubes and annulus, pressure drop calculation, Algorithm for design and performance calculation of hair-pin heat exchangers. UNIT-III Shell and tube heat exchangers: Classification and nomenclature pertaining to industrial version heat exchangers, baffles and tube-pitch arrangement, thermal design consideration of shell and tube heat exchanger for single and twophase heat transfer, calculations. Boiling and condensation: Pool boiling, forced convection boiling, physical mechanism of condensation, laminar film and turbulent film condensation, condensation in horizontal tube, drop wise condensation. UNIT-IV Cooling towers: Basic principle of evaporative cooling, psychrometric processes, classification of cooling towers, performance characteristics of cooling tower. Evaporators: Introduction and classifications of evaporator, temperature profile in evaporator, methods of feeding evaporator, performance of evaporator, thermal design considerations, mechanical design considerations, single effect and multiple effect evaporator. **Textbooks** 1. Heat Exchangers Selection Rating and Thermal Design (2nd Edition): SadikkakacHongtan Liu, CRC Press Boca Rattan Londan New York, Washington, D.C. 2. Heat Exchanger Design: Ramesh K. Shah and Dusan P. Sekulic, John Wiley & Sons, Inc. 3. Incropera, F. P. and De Witt, D. P., Fundamentals of Heat and Mass Transfer, 4th Edition, John Wiley and Sons, New York. Reference books Donald Q. Kern: Process Heat Transfer, McGraw - Hill, New York. 2. Kays, W. M. and London, A. L., Compact Heat Exchangers, 2nd Edition, McGraw - Hill, New York. 3. MME-256	ENERGY STORAGE SYSTEMS		
Course Category	:	Program Elective (PE)	
Pre-requisites	:	NIL	
Contact Hours/Week	:	Lecture: 3, Tutorial: 1, Practical: 0	
Number of Credits	:	4	
Course Assessment	:	Continuous assessment through tutorials, attendance, home	
Methods		assignments, quizzes, and Three Minor tests and One Major Theory Examination.	

Course Outcomes	: The students are expected to be able to demonstrate the following knowledge	ge,
	skills and attitudes after completing this course.	
Understand need and	l potential of energy storage system.	
2. 4Understand the con	cept electrochemical energy storage and sensible heat storage system.	
	cept of phase change material and numerical analysis of heat transfer mechanism	of
PCM during melting	g and freezing process.	
_	at the application of energy storage system in the field of solar energy, waste her g for process industries.	at,
Topics Covered		
UNIT-I		
Need of energy storage.		9
	gy Storage Potential energy: Pumped hydro storage; KE and Compressed gas system:	
1	sed air energy storage; Electrical and magnetic energy storage: Capacitors electromagnets;	
	Thermo-chemical, photo-chemical, bio-chemical, electro-chemical, fossil fuels and	
	for energy storage. Solar Ponds for energy storage	
UNIT-II	<i>c. c c. c</i>	
Electrochemical Energy S	Storage Systems:	9
	ary, Lithium, Solid-state and molten solvent batteries; Lead acid batteries; Nickel Cadmium	
-	ries. Role of carbon nanotubes in electrodes Sensible Heat Storage SHS mediums; Stratified	
	storage systems; Thermal storage in buildings; Earth storage; Energy	
	orage in SHS systems; Aquifers storage.	
UNIT-III	orage in site of overme, required bloringer	H
Latent Heat Thermal En	erav Storage	9
	CMs); Selection criteria of PCMs; Stefan problem; Solar thermal LHTES systems; Energy	
	ΓES systems; LHTES systems in refrigeration and air-conditioning systems; Enthalpy	
	at transfer in melting and freezing process	
UNIT-IV	at transfer in merting and freezing process	
Some Areas of Application	an of Energy Storage	9
	neat recovery; Solar energy storage; Greenhouse heating; Power plant applications; Drying	
and heating for process inc		
and heating for process me	iustries.

MME-161	FINITE ELEMENT METHOD	
Course category	: Program Electives (PE)	
Pre-requisite Subject	: NIL	
Contact hours/week	: Lecture: 3, Tutorial: 1, Practical: 0	
Number of Credits	: 4	
Course Assessment	: Continuous assessment through tutorials, attendance, hor	me
methods	assignments, quizzes, practical work, record, viva voice, one majortest and or major examination.	ne
Course Outcomes	: The students are expected to be able to demonstrate the following knowledge, skills and attitudes after completing this course	

- 1. To develop the ability to generate the governing finite element equations for systems governed by partial differential equations.
- 2. To understand the use of the basic finite elements for structural applications using truss, beam, frame and plane elements;
- 3. To understand the application and use of the finite element method for heat transferproblems.
- 4. To demonstrate the ability to evaluate and interpret Finite Element Method analysis results for design and evaluation purposes.
- 5. To develop a basic understanding of the limitations of the Finite Element Method andunderstand the possible error sources in its use.

UNIT-I

Introduction: Historical background, basic concepts of FEM, Comparison with Finite DifferenceMethod, Advantages and limitations, Different approaches in Finite Element Method-Discrete, Variational approach, Weighted Residual methods.

UNIT-II

Direct Problems- Spring, Hydraulic Network; Resistance Network and Truss Systems

Finite element analysis of 1-D problems: formulation by different approaches (direct, potentialenergy and Galerkin); Derivation of elemental equations and their assembly, solution and its postprocessing. Applications in heat transfer, fluid mechanics and solid mechanics. Bending of beams, analysis of truss and frame.

UNIT-III

Finite element analysis of 2-D problems: Finite Element modelling of single variable problems, triangular and rectangular elements; Applications in heat transfer, fluid mechanics and solid mechanics;

UNIT-IV

Numerical considerations: numerical integration, error analysis, mesh refinement. Plane stress and plane strain problems; Bending of plates; Eigen value and time dependent problems; Discussion about preprocessors, postprocessors and finite element packages.

Books & References

- 1. An Introduction to Finite Element Method J. N. Reddy (Tata McGraw Hill).

MME-261	E	ENERGY MODELLING AND PROJECT MANAGEMENT		
CourseCategory	:	Program Elective (PE)		
Pre-requisites	:	NIL		
Contact	:	Lecture: 3, Tutorial: 1, Practical: 0		
Hours/Week				
Number of	:	4		
Credits				
Course	:	Continuous assessment through tutorials, attendance, home assignments,		
Assessment		quizzes, and Three Minor tests and One Major Theory Examination.		
Methods				
Course Outcomes	:	The students are expected to be able to demonstrate the following knowledge,		
		skills and attitudes after completing this course.		

- 1. Understand the importance of energy management and application of energy management in boiler, turbine and heat exchanger etc.
- 2. Understand the concept of energy audit and responsibility of energy auditor.
- 3. Knowledge of material and energy balance of energy converting devices
- 4. Understand the purpose energy policies, managerial function, strategies, marketing, training and planning of any organization

UNIT-I

Models and modeling approaches:

Input output analysis, energy demand analysis and forecasting, project management. Multiplier Analysis – Energy and Environmental Input / Output Analysis-Energy Aggregation-Econometric Energy Demand Modeling-Overview of Econometric Methods. Methodology for Energy Demand Analysis – Methodology for Energy Technology Forecasting-Methodology for Energy Forecasting Sectoral Energy Demand Forecasting. Solar Energy-Biomass Energy-Wind Energy and other Renewable Sources of Energy.

UNIT-II

Basic concept of econometrics and statistical analysis:

The 2-variable regression model; The multiple regression model; Tests of regression coefficients and regression equation; Econometric techniques used for energy analysis and forecasting with case studies from India; Operation of computer package Input – Output Analysis, Basic concept of Input-output analysis; concept of energy multiplier and implication of energy multiplier for analysis of regional and national energy policy; Energy and environmental Input – Output analyses using I-O model.

UNIT-III

Energy Modeling:

Interdependence of energy-economy- environment;

Modeling concept, and application, Methodology of energy demand analysis; Methodology for energy forecasting; Sectoral energy demand forecasting; Interfuel substitution models; SIMA model, and I-O model for energy policy analysis; Simulation and forecasting of future energy demand consistent with macroeconomic parameters in India; Energy Economics and Policies: National and Sectoral energy planning; Integrated resources planning; Energy pricing.

UNIT-IV

Project Evaluation & Damp; Management: Financial analysis:

Project cash flows, time value of money, life cycle approach & Damp; analysis, conception, definition, planning, feasibility and analysis; Project appraisal criteria; Risk analysis; Project planning matrix; Aims oriented project planning; Social cost benefit analysis. Network analysis for project management; Time estimation; Critical path determination; PERT, CPM and CERT: Fuzzy logic analysis; Stochastic based formulations; Project evaluation techniques; Funds planning; Project material management, evaluation & Damp; analysis; Implementation and monitoring; Performance indices; Case studies. Autonomous Fossil Fuel and renewable energy (RE) - based Power Systems.

Course Catego	ory	:	Program Electives (PE)
Pre-requisites	S	:	NIL
Contact Hour	·s/Week	:	Lecture: 3, Tutorial: 1, Practical: 0
Number of Credits		:	4
Course	Assessment	:	Continuous assessment through tutorials, attendance, home assignments,
Methods			quizzes, practical work, record, viva voce and One Minor test and One
			Major Theory & Practical Examination
Course Outco	mes	:	The students are expected to be able to demonstrate the following
			knowledge, skills, and attitudes after completing this course

- 1. Ability to understand the role of computer in the areas of automation, planning, and manufacturing forimproving their effectiveness.
- 2. Ability to develop manual part program and computer assisted part program to produce components.
- 3. Ability to design and develop various system such as feedback, interpolator, material handling and implementation of adaptive control.
- 4. Ability to apply the concept of group technology and computer assisted process planning.

Topics Covered	
UNIT-I	
Materials and Classification: Introduction, Demand of advanced materials, Classification of different materials and	9
alloys. Macro and micro analysis of materials, Segregation and bonding, Strengthening mechanisms.	
UNIT-II	
Properties of Materials: Flexural Test, Toughness tests, Creep characteristics, Hardness tests, Fracture test,	9
Griffith's crack theory, Strain hardening, Single crystal growth.	
Wear: Modes of adhesive, abrasive, erosive, fretting, sliding.	
UNIT-III	
Techniques of Materials Characterization: Definition; importance and application of X-ray diffraction technique	9
for phase identification, Scanning Electron Microscope; Principles of image formation in SEM, Energy dispersive X-	
ray analysis, Thermo-mechanical behavior of composites materials, DSC, AFM.	

UN	IT-IV

MME-262	A	LTERNATIVE FUELS FOR TRANSPORTATION
Course Category	:	Program Elective (PE)
Pre-requisites	:	NIL
Contact Hours/Week	:	Lecture: 3, Tutorial: 1, Practical: 0
Number of Credits	:	4
Course Assessment Methods	:	Continuous assessment through tutorials, attendance, home assignments, quizzes, and Three Minor tests and One Major Theory Examination.
Course Outcomes	:	The students are expected to be able to demonstrate the following knowledge, skills and attitudes after completing this course.
 Ability to understand the basics and need of alternate fuels in current scenario. Ability to utilize the alcoholic fuels and their blends in place of conventional fuels and their performance. 		

- 2. Ability to utilize the alcoholic fuels and their blends in place of conventional fuels and their performance.
- 3. Ability to utilize Natural Gas, LPG, Hydrogen and Biogas in SI and CI engines and their performance and emission characteristics.
- 4. Ability to have knowledge of vegetable oils and their performance and basics of Electric, Hybrid, Fuel Cell and Solar Cars.

Topics Covered UNIT-I Need for alternate fuel Availability and properties of alternate fuels, general use of alcohols, LPG, hydrogen, ammonia, CNG and LNG, vegetable oils and biogas, merits and demerits of various alternate fuels, introduction to alternate energy sources like EV, hybrid, fuel cell and solar cars. UNIT-II Alcohols Properties as engine fuel, alcohols and gasoline blends, performance in SI engine, methanol and gasoline blends, combustion characteristics in CI engines, emission characteristics, DME, DEE properties performance analysis,

performance in SI & Di Engines.		
UNIT-III		
Natural Gas, LPG, Hydrogen and Biogas		
Availability of CNG, properties, modification required to use in engines, performance and emission characteristics of		
CNG using LPG in SI & amp; CI engines, performance and emission of LPG. hydrogen; storage and handling,		
performance and safety aspects hydrogen combustion characteristics, flashback control techniques, safety aspects and		
system development, NOx emission control, natural gas components, mixtures and kits, fuel supply system and		
emission studies and control.		
UNIT-IV		
Vegetable Oils	9	
Various vegetable oils for engines, esterification, performance in engines, performance and emission characteristics,		
bio diesel and its characteristics.		
Electric, Hybrid, Fuel Cell and Solar Cars		
Layout of an electric vehicle, advantage and limitations, specifications, system components, electronic con	ıtrol	
system, high energy and power density batteries, hybrid vehicle, fuel cell vehicles, solar powered vehicles.		
Textbooks

MME-263	NUCLEAR SCIENCE AND ENGINEERING
CourseCategory	: Program Elective (PE)
Pre-requisites	: NIL
Contact Hours/Week	: Lecture: 3, Tutorial: 1, Practical: 0
Number of Credits	
Course Assessment Methods	Continuous assessment through tutorials, attendance, home assignments, quizzes, practical work, record, viva voce and Three Minor tests and One Major Theory & Practical Examination.
Course Outcomes	: The students are expected to be able to demonstrate the following knowledge, skills and attitudes after completing this course

- 1. Ability to understand the concept of nuclear physics, Laws of radioactive decay and nuclear models
- 2. Ability to develop and design blade and understand the performance of horizontal and vertical axis wind machines.
- 3. Ability to understand Nuclear reactions, nuclear fission and liquid drop model.
- 4. Ability to control and understand the working of different nuclear reactor.

UNIT-I	\top	
clear constituents - charge, mass, shape, and size of nucleus, Binding energy, packing fraction, nuclear magnetic		
moment, saturation and short range nuclear forces, Radioactivity - Laws of radioactive decay, half-life, mean life	,	
specific activity, Nuclear models - single particle shell model, evidence and limitations of shell model, liquid drop		
model: Introduction, assumptions, semi-empirical mass formula		
UNIT-II		
Mechanisms of Nuclear Decay		
Law of radioactive decay, half-life, mean life, specific activity, partial radioactive decay, successive disintegration, α		
decay: Barrier penetration, β decay: Fermi theory, selection rules, parity non-conservation, γ decay of excited states.		
Nuclear Detectors and Accelerators		
Types of detectors, Geiger-Mueller counter, Scintillation counter, classification of accelerators, Cyclotron, Betatron.		
UNIT-III		
Introduction to Nuclear Engineering		
Theories of Nuclear reactions, Conservation laws, Q-value equation, Nuclear fission, explanation on the basis of		
liquid drop model, energy available from fission, Nuclear chain reaction, Nuclear fusion.		
UNIT-IV		
Nuclear Reactors		
Nuclear Reactor - Basic principle, classification, constituent parts, Heterogeneous reactor, Swimming pool reactor,		
Breeder reactor, Heavy water cooled and moderated CANDU type reactors, Gas cooled reactors		
Books & References:		
Textbooks

MME-265	ENVIRONMENTAL IMPACT OF ENERGY SYSTEMS
CourseCategory	: Program Elective (PE)
Pre-requisites	: NIL
Contact Hours/Week	: Lecture: 3, Tutorial: 1, , Practical: 0
Number of Credits	: 4
Course Assessment Methods	: Continuous assessment through tutorials, attendance, home assignments, quizzes, record, viva voce and Three Minor tests and One Major Theory.
Course Outcomes	: The students are expected to be able to demonstrate the following knowledge, skills and attitudes after completing this course.

- 1. Understand need and potential of energy storage system.
- 2. Understand the concept electrochemical energy storage and sensible heat storage system.
- 3. Understand the concept of phase change material and numerical analysis of heat transfer mechanism of PCM during melting and freezing process.

4. Understanding about the application of energy storage system in the field of solar energy, waste heat, drawing and heating for process industries.

Topics Covered

UNIT-I

Impact of Energy Systems on Environment

Environmental degradation due to energy production and utilization, Primary and Secondary pollution such as SOx, NOx, SPM in air, thermal and water pollution, depletion of ozone layer, global warming, biological damage due to environmental degradation. Sociological and Economical problems due to Thermal and other energy projects. Physiological, ecological and environmental and health problems due to energy plants, Methods of Environmental Impact Assessment, Pollution due to Vehicles and Utilities, Methods to control emission from vehicle, Boilers, Furnaces etc., International Standards for quality of air and norms for exhaust gases, Effect of Hydroelectric power stations on ecology and environment

UNIT-II

Pollution due to Thermal, Hydel and Nuclear Power Plants

Potential sources of pollution in thermal power plant, Air, water, land pollution due to estimation for thermal power plant. Environmental pollution limits guidelines for thermal power plant pollution control. Various pollution control equipment such as dust collector, bag filter, electrostatic separator, working principle and selection criteria, designing the pollution control system, methods and limitation. Water pollution in thermal power plant, physical and chemical methods of pollution control, Land pollution effect of land pollution, measurement of land pollution, Limitations and advantages of pollution control systems. Hydrothermal plant environmental assessment, hydrothermal plant and rehabilitation measures for hydrothermal plant

UNIT-III

Pollution due to Nuclear power plants

Nuclear power plants and environmental pollution, pollution control measures

Industrial and Urban Waste & Damp; Waste Energy Recovery

(C-1.0, L-10) Industrial waste, Waste and effluent treatment, Waste as a source of energy: Industrial, domestic and solid waste as a source of energy. Pollution control: Causes, process and exhaust gases and its control, mechanism and devices for pollution control.

UNIT-IV

Environmental and Pollution Control Laws

United Nations Framework Convention on Climate Change (UNFCC), Protocol, Conference of Parties (COP)19 Clean Development Mechanism (CDM), Prototype Carbon Funds(PCF) Carbon Credits and it's trading, Benefits to developing countries, Building a CDM project.

Global Environmental Concern

Global Environmental Issues, ozone layer depletion, Global Warming, Green House Gases Emission
