

Message from Vice Chancellor

Dear Teachers, Students, Officers and Staff Members of the University

Seasons greetings!

Congratulations on graceful completion of three years since reconstitution of erstwhile M.M.M. Engineering College into M.M.M. University of Technology, Gorakhpur as a non-affiliating, teaching and research University.

As first Vice Chancellor of the University, I am obliged for the tangible and intangible support extended by teachers, officers, staff members of University and whole hearted support of dear students in all endeavour to execute transformations for building a technical University with difference. This journey has been full of pleasant surprises, rich experiences and carries great remembrance of every activity undertaken by this University starting from admission to convocation.

Today, the new academic framework with different assessment criteria has been successfully implemented for all UG | PG programmes and the changes in student-teacher involvement in teaching – learning processes are visible. I am confident that the continued efforts of teachers, students and staff for embedding teaching, examination and evaluation processes with commitment to deliver the best, transparency, adherence to time schedules and high quality will definitely yield the desired results over a period of time. When I look three years back, I feel delighted to see that the aggressive initiatives taken for overcoming the weaknesses in infrastructure, human resource, academic and administrative processes have facilitated the smooth transformation of erstwhile college and emergence of this University which is buzzing with dynamism in almost all of its dimensions.

On philosophical note, I wish to remind the truth of life that the time spent by us becomes the past and the activities done during this time become

history, so it is essential for every one of us to make his/her conscious and meaningful contribution in building this Institution in accordance with the Vision & Mission of the University and create a history worth rejoicing.

Currently, the University is going to start the even semester of 2016-17 after finishing the odd semester 2016-17 as per the prescribed academic calendar. As part of the fresh academic activity of the ensuing semester, new challenges have been thrown to all teachers in the form of the subjects to be taught with difference and the students are ready to learn the most. This is high time when both teacher and students need to understand the paradigm shift in the technical education where the success of any programme is gauged through the quality of employment and other opportunities created for the graduating students through the respective technical programme. This changed scenario of technical education requires the teachers to act as catalysts for transforming the students into holistic technical professionals who are well verse with principles, concepts and applications of every subject taught to them and have sufficient motivation to be self-initiated learners in the respective field. Present world demands the technical Institutions to roll out job-ready suitable technical professionals with radical thinking and interdisciplinary analytical approach.

Therefore, I wish to call upon the teachers to understand their roles in building the future of this planet earth and lay sufficient thrust upon the sustainability in all of their initiatives and actions. The global challenges pertaining to energy and environment need to be addressed carefully so that the coming generations continue to reap the same benefits as done currently. The students are also advised to actively participate in upgradation of civilization and all possible technological advancements of sustainable nature through their creative minds. I extend my best wishes and appeal to all concerned for taking all possible innovative actions to enrich the routine teaching learning activities from every aspect to make them more interesting, meaningful and pragmatic with the active participation of teachers, students, officers and staff members of the University for improving the overall standard of University.

Jai Hind.

Date: 15th December, 2016

Prof. Onkar Singh

Vice Chancellor

M.M.M. University of Technology, Gorakhpur
